

# WHY RENEWABLE ENERGY

## BY: MARIA RIOS

### Why Renewable Energy?

Renewable energy is needed because it helps the earth stay healthy. Pollution occurs when the coal is burned and the carbon dioxide rises into the air. Solar energy helps the earth because it comes every day unlike coal, it takes a whole lifetime for more to form.

How can these forms of renewable energy benefit the environment?

The types that benefit the environment are:

- \* Solar power
- \* Hydroelectric
- \* wind energy

How can these forms of energy benefit the citizens of Colorado or the United States?

These forms of energy can benefit the citizens of the U.S. because living in a less polluted helps the environment stay clean so many of us don't have to live in a polluted world.
